Contents

Preface (v)
Contributors (vii)
List of Tables (ix)
List of Illustrations (xi)

Section 1
Powder Metallurgy in Automotive Related Industries

Chapter 1 Powder Metallurgy—Changing Trends 1–8
1.1 The Size of the Industry 1
1.2 Comparative Cost 3
1.3 Innovations in Warm Compaction 3
1.4 Powder Forging 4
1.5 Surface Densification of Selected Areas 5
1.6 Innovations in Materials 6
1.7 Soft Magnetic Composites (SMC) 6
1.8 Developments in Green Machining 7
1.9 Developments in PM Equipment 7
   Conclusions 8
   References 8

Chapter 2 Prealloyed Molybdenum Low-Alloy Steel Powders and the Flexibility of Hybrid Alloys based on these Powders 9–18
2.1 Introduction 9
2.2 Quench-Hardened and Tempered Properties 10
2.3 Hybrid Analogs of Diffusion Alloys based on an Iron Powder 12
2.4 PM Chromium Steels 14
2.5 PM Manganese Steels 16
   Conclusion 17
   References 17

Chapter 3 Effect of Powder Mix Formulation and Sintering Conditions on the Dimensional Stability of Sinter Hardening Powders 19–26
3.1 Introduction 19
3.2 Experimental Procedures 20
3.2.1 Effect of powder formulation on dimensional behaviour
3.2.2 Dimensional consistency in mass production

Conclusions
References

CHAPTER 4 New Press Type EP with Electrical Servo Drive System
4.1 Introduction
4.2 The Electrical Servo Drive System
  4.2.1 Fundamental principles of the electrical servo drive
  4.2.2 Implementation of the technology in the machine
  4.2.3 Control system DVS/DCS® and IPG®
  4.2.4 Advantages compared to previous press types
4.3 Upshot

CHAPTER 5 RAT-CAT in PM Parts Production
5.1 Introduction
5.2 Advantages of Powder Metallurgy Components
5.3 Unique Requirements for Quality in PM
5.4 PM Growth Story
5.5 Key Distinction
5.6 Cost of Quality
  5.6.1 Cost of prevention
  5.6.2 Cost of appraisal
  5.6.3 Cost of internal failure
  5.6.4 Cost of external failure
5.7 General Ratio’s on Cost of Quality—Stage 0 (Current Condition)
5.8 RAT-CAT Approach to Reduce Cost of Quality
  5.8.1 Introduction to RAT
  5.8.2 General ratio’s on cost of quality—Stage 1
  5.8.3 CAT—Cause Analysis Table
  5.8.4 General ratio’s on cost of quality—Stage 2
5.9 RAT-CAT Approach Through Examples in PM Part
5.10 What Next?
Conclusions
References

CHAPTER 6 Hot Isostatic Pressing for Near-net or Net Shape Components for Automotive and Engineering Industry
6.1 Introduction
6.2 Principles of Hot Isostatic Pressing
  6.2.1 Origin of pores [3]
  6.2.2 Closure of pores [3]
6.3 Densification in HIPing and its modeling
6.3.1 Densification steps in HIPing
6.3.2 Densification mechanisms in HIPing
6.3.3 Modeling of HIPing
6.3.4 HIP maps
6.4 Processing Steps and Aspects of Practice
6.4.1 Sintering, Cold Pressing and Cold Isostatic Pressing
6.4.2 Types of Encapsulations
6.4.3 Types of Degassing
6.4.4 Types of HIP Cycles
6.4.5 Decapsulation and Finishing
6.5 Subsystems and Elements of HIP System
6.6 Types of Materials Systems
6.7 Categories of Applications
6.8 Advantages
6.9 Disadvantages
    Conclusion
    References

CHAPTER 7 Characterization of Hipped and Hot Forged Nano-sized Yttria
    Dispersed Fe-20 Cr-4.5 Al-0.5 Ti Ferritic Stainless Steel for High
    Temperature Applications Prepared by MA
7.1 Introduction
7.2 Experimental Details
    7.2.1 Synthesis of nanocrystalline yttria
    7.2.2 Synthesis of yttria dispersed ferritic stainless steel powders by MA
    7.2.3 Hot forging of ODS ferritic stainless steel powders
    7.2.4 High temperature oxidation studies
    7.2.5 Hot isostatic pressing (HIP) of ODS ferritic stainless steel powders
7.3 Results and Discussion
    7.3.1 Characterization of As milled powders
    7.3.2 Characterization of hot forged and solution annealed ODS alloy specimens
    7.3.3 Microhardness tests
    7.3.4 Shear punch tests
    7.3.5 High temperature oxidation study
    7.3.6 Characterization of HIPed ODS specimen
    Conclusion
    Acknowledgement
    References
CHAPTER 8 Metal Injection Moulding—A New P/M Route for Development of Nickel Wicks, Used in LHP’s 66–75

8.1 Introduction 66
8.2 Experimental Procedure 67
  8.2.1 Determining porosity, pore dia and permeability 69
8.3 Results and Discussion 70
  8.3.1 Effect of sintering parameters 71
  8.3.2 Distribution of pore size 72
  8.3.3 Usefulness of polypropylene powder 72
  8.3.4 Microstructural characterization of pore structures 73
Conclusion 74
8.5 Acknowledgements 74
References 75

CHAPTER 9 Laser Cladding and Powders 76–82

9.1 Introduction 76
9.2 Mathematical Models 77
9.3 Laser vs. Conventional Welding 77
9.4 Laser Cladding
  Conclusions 82
  Reference 82

CHAPTER 10 Development of Nickel-based Cladding through Microwave Hybrid Heating 83–90

10.1 Introduction 83
10.2 Experimental Procedure 84
  10.2.1 Materials details 84
  10.2.2 Development of clads 85
  10.2.3 Characterization of the clads 86
10.3 Results and Discussion 86
  10.3.1 X-ray diffraction results 87
  10.3.2 Microstructure study 87
  10.3.3 Microhardness study 89
Conclusions 89
References 89

CHAPTER 11 Experimental Study of Physical Properties of MIM Product made from Industrial Metallic Waste 91–98

11.1 Introduction 91
11.2 Experimental Work 92
11.3 Characterization of Metallic Waste 93
11.4 Feedstock Preparation 94
11.5 Results and Discussion 96
   Conclusion 97
   Acknowledgements 98
   References 98

CHAPTER 12 A Modulated Pole Machine for Use in an Electric Two-wheeler Application 99–103
12.1 Introduction 99
12.2 Laminated Two-wheeler Hub Motor 99
12.3 Modulated Pole Machine 99
12.4 Design Outline 100
12.5 Construction and Testing 101
   Conclusion 102
   References 103

CHAPTER 13 Study of Sintered Metal Matrix Friction Brake Materials 104–111
13.1 Introduction 104
13.2 Material and Experimental Details 105
   13.2.1 Materials and Methods 105
   13.2.2 Metallographic observations 106
   13.2.3 Wear tests 106
13.3 Results and Discussion 107
   13.3.1 Microstructure and worn surface analysis 107
   13.3.2 Wear analysis 107
   13.3.3 Coefficient of friction analysis 108
   Conclusions 110
   Acknowledgement 110
   References 110

SECTION 2
Powder Metallurgy Aluminium Alloys and Composites

CHAPTER 14 Investigation Metallurgical and Mechanical Properties of Aluminium Powder Metal Parts by Microwave Sintering Method 112–116
14.1 Introduction 112
14.2 Experimental Method and Materials 113
14.3 Results and Discussion 113
   Conclusions 116
   Acknowledgement 116
   References 116
CHAPTER 15 Synthesis of Aluminium-based Nanocomposites Employing Cryomilling Technique

15.1 Introduction 117
15.2 Experimental Procedure 118
15.3 Results and Discussions
   Conclusion 119
   Acknowledgments 123
   References 123

CHAPTER 16 Influence of Shot Peening on Mechanical Properties of the Alumix 431 PM Alloys

16.1 Introduction 124
16.2 Experimental Studies 125
16.3 Results and Discussions
   Conclusions 128
   Acknowledgement 134
   References 134

CHAPTER 17 Development of 7075 Aluminium Alloy Reinforced Composites

17.1 Introduction 136
17.2 Experimental Procedure 137
17.3 Results and Discussion
   Conclusions 138
   References 148

CHAPTER 18 Investigation of Stud Weldability of Powder Metal Al Plates

18.1 Introduction 150
18.2 Experimental Procedures 151
18.3 Results and Discussion
   Conclusions 151
   Acknowledgement 154
   References 155

CHAPTER 19 Sliding Wear Behavior of Mechanically Alloyed Al-Si-SiCp Nanocomposites

19.1 Introduction 156
19.2 Experimental 157
19.3 Results and Discussion
   Conclusions 157
   Acknowledgement 162
   References 163
CHAPTER 20 Synthesis of Titanium Aluminides by Mechanical Alloying and their Sintering Behavior 164–174

20.1 Introduction 164
20.2 Experimental Procedure 165
20.3 Results and Discussion 166
  20.3.1 MA process 166
    20.3.1.1 XRD analysis 166
    20.3.1.2 DTA study 168
    20.3.1.3 Microstructure 168
  20.3.2 Sintering process 170
    20.3.2.1 XRD analysis 170
    20.3.2.2 Microstructure 171
    20.3.2.3 EDAX analysis 172
    20.3.2.4 Physical and mechanical properties 172

Conclusion 173
References 173

SECTION 3
Hard and Super Hard Materials

CHAPTER 21 Structure of Nanocrystalline Cemented Carbides Sintered by the Pulse-plasma Method 175–180

21.1 Introduction 175
21.2 Scope and Conditions of Investigations 176
21.3 Results of Investigations 177
  Conclusions 180
  Acknowledgement 180
  References 180

CHAPTER 22 Brittness of Nanocrystalline Cemented Carbides obtained by the PPS Method 181–187

22.1 Introduction 181
22.2 Materials and Methods 182
22.3 Results 184
  Conclusions 187
  Acknowledgement 187
  References 187
CHAPTER 23 Influence of the TaC-NbC on Durability of Cutting Edges Made of Nanocrystalline Cemented Carbides

23.1 Introduction 188
23.2 Scope of Investigations 189
23.3 Materials and Experimental Procedures 189
23.4 Results of Investigations 191
   Conclusions 194
   Acknowledgement 194
   References 194

CHAPTER 24 Synthesis of Boron Carbide through Carbothermal Reduction Using Boric Acid and Sucrose Precursors

24.1 Introduction 195
24.2 Experimental Study 196
24.3 Results and Discussion 197
   Conclusions 201
   Acknowledgement 201
   References 201

CHAPTER 25 Investigation of Mechanical Behavior of B₄C/Diamond Reinforced Fe/Co Metal Matrix Composites Produced by Powder Metallurgy

25.1 Introduction 203
25.2 Experimental Study 204
25.3 Mechanical Tests 205
25.4 Results and Discussion 206
25.5 Wear Test 207
25.6 Microstructure 208
   Conclusion 209
   References 209
   Index 211
