Contents

Preface	v
1. New Products and Processes and the Global Growth of Powder Metallurgy ...	1-13
1.1 Introduction	1
1.2 Ancorsteel® 4300	3
1.3 Ancorsteel 737SH Capabilities	7
1.4 Higher Density	9
1.5 Ancordense® Process (Warm Compaction)	10
1.6 Ancormax D® Process (Warm Die Compaction)	10
1.7 Ancormax 200 Process	11
1.8 Conclusions	12
<i>References</i>	13
2. An Industry Overview on Sinter Hardening Solutions	14-22
2.1 Introduction	14
2.2 Experimental Procedure	15
2.3 Results and Discussion	19
2.4 Influence of Size and Mass	20
2.5 Conclusions	21
<i>References</i>	22
3. Developments in PM Engine Components	23-35
3.1 Some Main Objectives of the Automobile Manufacturers	23
3.2 Some Means to Achieve those Goals	25

3.3	Contribution of PM Technology to the Market Demands	26
3.3.1	Powder-forged Connecting Rods	26
3.3.2	Main Bearing Caps	27
3.3.3	Aluminum Camshaft Bearing Caps	27
3.3.4	Gasoline Pump Elements	28
3.3.5	Variable Flow and Weight Reduced Oil Pumps	28
3.3.6	VVT: Variable Valve Timing	29
3.3.7	Composite Camshafts	29
3.3.8	Lightweight Distribution Pulleys	30
3.3.9	Common Rail Diesel Injection Systems	30
3.3.10	EGR: Exhaust Gas Recirculation Systems	31
3.3.11	Stainless Steel Exhaust Flanges	31
3.3.12	Gasoline Injection System	32
3.3.13	Increased Pressure Power Steering	32
3.4	Evolution of Necessary Technologies in PM	33
3.4.1	Sinter Hardening Steels	33
3.4.2	Low Alloy, Low Cost, High-strength Alloys	33
3.4.3	Improved Soft-Magnetic Materials and their Processing	33
3.4.4	Sinter-Hardening Furnaces	33
3.4.5	Sinter Forging	33
3.4.6	Press Hardening	33
3.4.7	Warm Compaction	33
3.4.8	Improved Compacting Lubricants	34
3.4.9	Improved Coining Lubricants	34
3.4.10	Improved Precision Presses and CNC Controls	34
3.4.11	Increased Number of CNC Plattens in Presses	34
3.4.12	Improved Tool Geometry and Tolerancing	34
3.4.13	Surface Densification	34
3.4.14	Improved Stainless Steels Processing	34
3.4.15	New Sealing and Plating Technologies	34
3.4.16	More Sophisticated Machining Machines	34
3.4.17	Improved Cleaning Machines and Cleanliness Control Systems	34
3.4.18	Novel Non-destructive Testing	35
3.4.19	Novel On-line and Off-line Inspection Systems	35
3.5	Conclusions	35
4.	PM Materials for Gear Applications	36-44
4.1	Introduction	36
4.2	Experiment and Material	37
4.3	Conclusions	43
	<i>References</i>	44

5. An Approach to Reduce Costs of Heat Treated Powder Metallurgy Parts ..	45-60
5.1 Introduction	45
5.2 Sinter-Hardening Alloys	46
5.3 Sintering Furnace Design	48
5.4 Tempering	50
5.5 0.3% Mo Prealloyed Powder for Heat Treated Applications	51
5.6 Experimental Procedure	54
5.7 Results and Discussion	55
5.8 Conclusions	59
<i>References</i>	59
6. Development of Indigenous Sintered Metallic Valve Guide for High Speed Automobiles	61-65
6.1 Introduction	61
6.2 Experimental	62
6.3 Properties Evaluation of Components	63
6.4 Conclusions	64
<i>References</i>	65
7. Development and Characterization of Iron Based Metal Matrix Composite for Brake Pads Applications	66-72
7.1 Introduction	66
7.2 Experiment	67
7.3 Results and Discussion	70
7.4 Conclusions	71
<i>Acknowledgements</i>	71
<i>References</i>	71
8. Expected Changes in PM Part Compaction	73-80
8.1 Introduction	73
8.2 Influences	75
8.3 Perspectives for the Future	75
8.4 CNC Hydraulic Press with CPA-controlled Punch Adapter	78
8.5 Conclusions	79
<i>References</i>	80
9. High-Speed Presses Increased Economy in Powder Compacting.....	81-87
9.1 Introduction	81
9.2 Possible Explanation	83
10. Improve Overall Equipment Effectiveness on Powder Compacting Systems	88-94
10.1 Calculations	88

10.2	Improvement of the Availability Factors	89
10.3	Performance Factors	92
10.4	Quality Factors	93
10.5	Conclusions	94
11.	Modern Hot-Pressing Technology Makes Sintering Quick and Easy	95-100
11.1	Introduction	95
11.2	Dr. Fritsch Direct Hot Pressing	97
11.3	Dr. Fritsch Direct Hot Presses	98
	<i>References</i>	100
12.	Development of Automated Cleaning Technique of Top Plungers Inducted in Rotary Press Used for the Fabrication of PFBR Size Annular Fuel Pellets.....	101-105
12.1	Introduction	101
12.2	Mixed Oxide Annular Pellets Fabrication for PFBR	102
12.3	Modification	103
12.4	Conclusions	104
	<i>Acknowledgements</i>	105
	<i>References</i>	105
13.	The Magic of "Open Book Management (OBM)" ACuPowder International, LLC Case History	106-112
13.1	Background on ACuPowder International, LLC	106
13.2	Initial Asset Based Financing Structure	109
13.3	Operating and Motivational Philosophy	109
13.4	Open Book Management	110
13.5	OBM-What is it?	111
13.6	OBM-How to Implement it?	111
13.7	OBM-Why does it Work?	111
13.8	It was Magic	112
13.9	Hurdles and Challenges	112
13.10	Conclusions	112
14.	Studies on the Hydroxide Preparation, Calcination and Related Characterization in the Powder Metallurgy of Hafnium	113-118
14.1	Introduction	114
14.2	Experimental	114
14.3	Results and Discussion	116
14.4	Conclusions	118
	<i>Acknowledgements</i>	118
	<i>References</i>	118

15. Preparation of High Purity Sub-Micron Spheroidal Zirconia Powder from Impure Zirconium Salt through Glycerol Route	119-124
15.1 Introduction	119
15.2 Experimental	120
15.3 Result and Discussion	121
15.3.1 Preparation of Pure Zirconia Powder	121
15.3.2 Preparation of Yttria Stabilized Zirconia	121
15.4 Conclusions	122
<i>References</i>	124
16. Synthesis and Characterization of Bi & Ta Doped Nanocrystalline PZT Ferroelectrics by Mechanical Activation	125-131
16.1 Introduction	125
16.2 Experimental Work	126
16.3 Conclusions	130
<i>References</i>	130
17. Synthesis and Characterization of CaWO_4 : AG Powders for Electronic Display Applications	132-139
17.1 Introduction	132
17.2 Experimental	133
17.3 Results and Discussion	134
17.4 Conclusions	138
<i>Acknowledgements</i>	139
<i>References</i>	139
18. The Effect of Chemistry and Microstructure on Mechanical Properties of Tungsten Heavy Alloys	140-151
18.1 Introduction	141
18.2 Experimental	141
18.3 Results and Discussion	143
18.4 Conclusions	150
<i>Acknowledgements</i>	150
<i>References</i>	150
19. Development and Fabrication of U-Mo Alloy Fuel Granules for Dispersion Fuel Application in Research and Test Reactors	152-168
19.1 Introduction	152
19.2 Experimental Work	155
19.2.1 Fabrication of U-10wt% Mo Alloy by Powder Metallurgy Route	155
19.2.2 Alloy Preparation by Induction Melting Route	157
19.2.3 Fabrication of U-Mo Alloy Fuel Granule from Pellet/Billet by Hydriding Dehydriding Method	158

19.2.4	Characterization	159
19.3	Results and Discussion	161
19.3.1	Phase Analysis	161
19.3.2	Optical Microscopy	164
19.4	Conclusions	167
	<i>Acknowledgements</i>	167
	<i>References</i>	168
20.	Improved Powder Metallurgy Technique for Fabrication of Mixed Uranium Plutonium Carbide Fuel Pellets for Fast Breeder Test Reactor	169–176
20.1	Introduction	169
20.1.1	Fabrication of Mixed Uranium Plutonium Carbide Fuel	170
20.2	New Fabrication Facility	171
20.3	Fabrication of UC Insulation Pellets for FBTR	175
20.4	Conclusions	176
	<i>References</i>	176
21.	Development and Characterization of Aluminium Based Hybrid Metal Matrix Composites for Light/Heavy Duty Applications	177–185
21.1	Introduction	178
21.2	Materials	178
21.2.1	Disc	178
21.2.2	Test Pins	179
21.3	Experimental Details	179
21.3.1	Determination of Density (Archimedes Principle)	179
21.3.2	Brinell Hardness Test	179
21.3.3	Wear Testing of the Composites	180
21.4	Results	180
21.4.1	Effect of Load and Sliding Speed on Wear Characteristics	180
21.4.2	Effect of Load and Sliding Speed on Co-efficient of Friction (COF)	181
21.4.3	Effect of Load and Sliding Speed on Temperature Rise at Mating Surface	182
21.4.4	Effect of Load and Sliding Speed on Noise Level	182
21.4.5	A Comparative Study of Al-based Composites with Fe-based Composites	183
21.5	Discussions	184
21.6	Conclusions	184
	<i>References</i>	185
22.	Test Methodology to Evaluate the Wear Performance of PM Matrices used in Diamond Impregnated Tools for Cutting Hard Materials	186–193
22.1	Introduction	186
22.2	Wear Equipment and Test Methodology	187
22.3	Powder Sintered Matrices and their Properties	188
22.4	Results of Wear Tests in Matrices without Diamond	190

22.5	Tests using Matrices with Diamond	191
22.6	Conclusions and Final Remarks	192
	<i>References</i>	193
23.	Machining/Enhancing Solutions for PM Materials	194-208
23.1	Introduction	194
23.2	Description of the PM Process	194
23.3	Machining Operations on PM Steels	195
23.4	Factors that Affect Machinability	195
23.5	Sintered Iron-based Materials	196
23.6	Microstructures	196
23.7	Machinability Testing	197
23.8	Influence of Carbon Content on Properties and Machining Processes	198
23.9	Classification of PM Materials Regarding Machinability	199
23.10	Additives	199
23.11	Influence of MnS and MnX Additions	200
23.12	Continuous and Intermittent Cutting	200
23.13	Effect on Machining Parameters	201
23.14	Influence of MnS and MnX Additions on Torque and Feed Force	202
23.15	Influence of Tool Material, CBN, on Sinter Hardened Astaloy CrM	202
23.16	Influence of Cutting Mode and Oil Impregnation	203
23.17	Dry vs Wet Drilling of Different Materials	204
23.18	Turning Tool Recommendations and Cutting Data	204
23.19	Selection of Drill Type	206
23.20	Conclusions	208
	<i>References</i>	208
24.	Effect of Machining on Work Hardening Characteristics of Powder Metallurgical Route Al/SiCp Metal Matrix Composites	209-218
24.1	Introduction	209
24.2	Experimental Set-up and Procedure	210
24.3	Experimental Results and Discussions	213
24.3.1	Effect of Size and Volume Fraction of Abrasive Reinforcement on Microhardness Variation	213
24.3.2	Statistical Analysis of Microhardness	215
24.3.3	Degree of Work Hardening	215
24.4	Conclusions	217
	<i>Acknowledgements</i>	218
	<i>References</i>	218
	Index	219-222
